**Population Density**

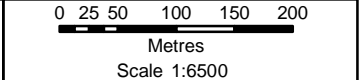

- 0.005348 - 0.094862
- 0.094863 - 0.237186
- 0.237187 - 0.447776
- 0.447777 - 0.919285
- 0.919286 - 1.636640

**NOTES:** Density was calculated using floor area per address extracted from CPS in August 2008. Floor area was divided by 15 m (to indicate a working population of 1 person per 15m floor space). This density was then divided by the property area to give a density per sq m.

Population density values were classified using Jenk's Natural Breaks Classification: This scheme determines the best arrangement of values into classes by iteratively comparing sums of the squared difference between observed values within each class and class means. The "best" classification identifies breaks in the ordered distribution of values that minimizes within-class sum of squared
